Subject: Random Usergroups error
Posted on: 05 December 2008 18:04:02
Message:

Occasionally when members of a Usergroup are posting to a forum which only allows that usergroup permission to view the following error shows:

> quote:
>
> ADODB.Field error '800a0bcd'
>
> Either BOF or EOF is True, or the current record has been deleted. Requested operation requires a current record.
>
> /forum/inc_func_common.asp, line 1706

Line 1706 is:

```
blnAllowed = 0
        Do While Not rsAllowedUserGroups.eof Or OldisAllowedMember <> 1
Line 1706    intUserGroupID = rsAllowedUserGroups("USERGROUP_ID")
            if InStr("," & strGroupsForUser & ",", "," & intUserGroupID & ",") then OldisAllowedMember = 1
            rsAllowedUserGroups.movenext
        Loop
        rsAllowedUserGroups.close
        set rsAllowedUserGroups = nothing
    end if
```

The post is still made but instead of being directed to the thankyou message the poster sees the error

Any ideas?

(MySql database)

```
        Do While Not rsAllowedUserGroups.eof Or OldisAllowedMember <> 1
```

Not knowing the code, I would almost bet you're problem lies here, because you may have [b]OldisAllowedMember[/red] <> 1 and no records in rsAllowedUserGroups, but this is just a guess...

So is this code from the mod or was it changed by someone?

Message:

That's the code from the mod

The full code for that function is:

```
function OldisAllowedMember(fForum_ID,fMemberID)
    OldisAllowedMember = 0
    if isDeniedMember(fForum_ID, fMemberID) then exit function
    strSql = "SELECT MEMBER_ID, FORUM_ID FROM " & strTablePrefix & "ALLOWED_MEMBERS "
    strSql = strSql & " WHERE FORUM_ID = " & cLng(fForum_ID)
    strSql = strSql & " AND MEMBER_ID = " & cLng(fMemberID)

    Set rsAllowedMember = Server.CreateObject("ADODB.Recordset")
    rsAllowedMember.open strSql, my_Conn
    blnAM = 0
    if not rsAllowedMember.bof and not rsAllowedMember.eof then blnAM = 1
    rsAllowedMember.close
    set rsAllowedMember = nothing

    '## if the member exists as an allowed member for the forum then return value 1
    if blnAm = 1 then
        OldisAllowedMember = 1
    else

        '## check for usergroup membership
        strGroupsForUser = getGroupMembership(fMemberID,1)
        if strGroupsForUser <> "" then
            '## check to see if the user's groups are a part of this forum
            strSql = "SELECT USERGROUP_ID FROM " & strTablePrefix & "ALLOWED_USERGROUPS "
            strSql = strSql & "WHERE FORUM_ID = " & fForum_ID
            strSql = strSql & " AND PERMS = 0"
            set rsAllowedUserGroups = my_Conn.execute(strSql)

            blnAllowed = 0
            Do While Not rsAllowedUserGroups.eof Or OldisAllowedMember <> 1
                intUserGroupID = rsAllowedUserGroups("USERGROUP_ID")
                if InStr("," & strGroupsForUser & ",", "," & intUserGroupID & ",") then OldisAllowedMember = 1
                rsAllowedUserGroups.movenext
            Loop
            rsAllowedUserGroups.close
            set rsAllowedUserGroups = nothing
        end if
    end if
end function
```

On line 1705, change it to say:

Do While Not (rsAllowedUserGroups.eof or rsAllowedUserGroups.BOF) Or OldisAllowedMember <> 1

This won't work, because the loop won't stop until oldisAllowedMember is 1.

Webbo, try this function version:

```
function OldisAllowedMember(fForum_ID,fMemberID)
    OldisAllowedMember = 0
    if isDeniedMember(fForum_ID, fMemberID) then exit function
    strSql = "SELECT MEMBER_ID, FORUM_ID FROM " & strTablePrefix & "ALLOWED_MEMBERS "
    strSql = strSql & " WHERE FORUM_ID = " & cLng(fForum_ID)
    strSql = strSql & " AND MEMBER_ID = " & cLng(fMemberID)

    Set rsAllowedMember = Server.CreateObject("ADODB.Recordset")
    rsAllowedMember.open strSql, my_Conn
    blnAM = 0
    if not rsAllowedMember.bof and not rsAllowedMember.eof then blnAM = 1
    rsAllowedMember.close
    set rsAllowedMember = nothing

    '## if the member exists as an allowed member for the forum then return value 1
    if blnAm = 1 then
        OldisAllowedMember = 1
    else

        '## check for usergroup membership
        strGroupsForUser = getGroupMembership(fMemberID,1)
        if strGroupsForUser <> "" then
            '## check to see if the user's groups are a part of this forum
            strSql = "SELECT USERGROUP_ID FROM " & strTablePrefix & "ALLOWED_USERGROUPS "
            strSql = strSql & "WHERE FORUM_ID = " & fForum_ID
            strSql = strSql & " AND PERMS = 0"
            set rsAllowedUserGroups = my_Conn.execute(strSql)

            blnAllowed = 0
            continueLoop = Not rs.AllowedUserGroups.eof

            Do While continueLoop
                intUserGroupID = rsAllowedUserGroups("USERGROUP_ID")
                if InStr("," & strGroupsForUser & ",", "," & intUserGroupID & ",") then OldisAllowedMember = 1
                rsAllowedUserGroups.movenext

                continueLoop = Not rs.AllowedUserGroups.eof

                If OldisAllowedMember = 1 then
                    continueLoop = false
                End If
            Loop
            rsAllowedUserGroups.close
            set rsAllowedUserGroups = nothing
        end if
    end if
end function
```

One tiny error, Ruirib, add the bit in red.

```
            If OldisAllowedMember = 1 then
                  continueLoop = false
            End If
        Loop
        rsAllowedUserGroups.close
        set rsAllowedUserGroups = nothing
      end if
   end if
end function
```

Hi Ruirib,

That code (with 'then' added) returns an error:

> quote:
>
> Microsoft VBScript runtime error '800a01b6'
>
> Object doesn't support this property or method: 'rs.AllowedUserGroups'
>
> /forum/inc_func_common.asp, line 1705

What line is that?

Message:

I think the problem is that you defined the rs as
rsAllowedUserGroups but are then incorrectly referring to it as Not rs.AllowedUserGroups

You are right Huw, that's precisely it. Thanks.

Webbo, here is the fixed code:

```
function OldisAllowedMember(fForum_ID,fMemberID)
    OldisAllowedMember = 0
    if isDeniedMember(fForum_ID, fMemberID) then exit function
    strSql = "SELECT MEMBER_ID, FORUM_ID FROM " & strTablePrefix & "ALLOWED_MEMBERS "
    strSql = strSql & " WHERE FORUM_ID = " & cLng(fForum_ID)
    strSql = strSql & " AND MEMBER_ID = " & cLng(fMemberID)

    Set rsAllowedMember = Server.CreateObject("ADODB.Recordset")
    rsAllowedMember.open strSql, my_Conn
    blnAM = 0
    if not rsAllowedMember.bof and not rsAllowedMember.eof then blnAM = 1
    rsAllowedMember.close
    set rsAllowedMember = nothing

    '## if the member exists as an allowed member for the forum then return value 1
    if blnAm = 1 then
        OldisAllowedMember = 1
    else

        '## check for usergroup membership
        strGroupsForUser = getGroupMembership(fMemberID,1)
        if strGroupsForUser <> "" then
            '## check to see if the user's groups are a part of this forum
            strSql = "SELECT USERGROUP_ID FROM " & strTablePrefix & "ALLOWED_USERGROUPS "
            strSql = strSql & "WHERE FORUM_ID = " & fForum_ID
            strSql = strSql & " AND PERMS = 0"
            set rsAllowedUserGroups = my_Conn.execute(strSql)

            blnAllowed = 0
            continueLoop = Not rsAllowedUserGroups.eof

            Do While continueLoop
                intUserGroupID = rsAllowedUserGroups("USERGROUP_ID")
                if InStr("," & strGroupsForUser & ",", "," & intUserGroupID & ",") then OldisAllowedMember = 1
                rsAllowedUserGroups.movenext

                continueLoop = Not rsAllowedUserGroups.eof

                If OldisAllowedMember = 1 Then
                    continueLoop = false
                End If
            Loop
            rsAllowedUserGroups.close
            set rsAllowedUserGroups = nothing
        end if
    end if
end function
```
